

AI PROMPT ENGINEER • LEGAL AUTOMATION SPECIALIST

Turning Legal *Complexity* into AI Leverage

Nigerian-licensed attorney with 5+ years in litigation and U.S. immigration law — now engineering AI workflows that produce attorney-ready, high-stakes documents at scale.

01 Who I Am

I'm a **Nigerian-licensed attorney and AI workflow engineer** who operates at the intersection of legal expertise and artificial intelligence. My background in litigation, corporate law, and U.S. immigration gives me something most prompt engineers don't have: a deep understanding of what *high-stakes structured output* actually looks like.

Over the past 3+ years, I've moved beyond casual AI use to build **repeatable, documented workflows** that produce attorney-ready documents — EB-2 NIW petition briefs, RFE responses, affidavits, and cover letters — consistently and at scale. My prompts aren't experiments; they're engineered systems with predictable outputs.

I think in **processes, not one-offs**. Every workflow I build gets documented into an SOP so it can be handed off, replicated, and improved. That combination of legal precision and systems thinking is what I bring to AI engineering.

CORE DOMAINS

- U.S. Employment-Based Immigration (EB-1A, EB-2 NIW, O-1A)
- Legal Document Drafting & Review
- Prompt Engineering for Structured Outputs
- AI Workflow Design & Documentation
- SOP Creation & Process Scaling

ADMITTED & CERTIFIED

- Nigerian Bar Association
 - Institute of Chartered Mediators & Conciliators
 - Environmental Law Institute (USA)
 - Certified Project Manager — Open University UK
-

02 AI Workflow Case Studies

Case Study 01 — Featured

EB-2 NIW Petition Brief System

EMPLOYMENT-BASED IMMIGRATION · MULTI-CLIENT · REPEATABLE WORKFLOW

Designed and deployed a complete AI-assisted workflow for drafting National Interest Waiver (EB-2 NIW) petition briefs — the most complex and evidence-intensive employment-based immigration category. The workflow has been applied across multiple clients in STEM, healthcare, and technology, consistently producing attorney-ready output.

- 1 Client profile intake & evidence mapping
- 2 Three-prong Skidmore analysis prompt chain
- 3 Structured argument scaffolding per USCIS criteria
- 4 Evidence integration & citation prompts
- 5 Attorney QA review layer prompts
- 6 SOP documentation for team replication

Result: 90% approval rate across EB-1A, EB-2 NIW & O-1A
+ petitions filed under attorney supervision

Case Study 02

RFE Response Drafting Pipeline

COMPLIANCE DOCUMENTATION · USCIS · HIGH-STAKES OUTPUTS

Built a structured AI workflow for drafting Requests for Evidence (RFE) responses — time-critical documents where vague or poorly structured responses result in petition denials. The workflow turns complex evidentiary materials into coherent, regulation-aligned arguments within tight deadlines.

Consistently passed attorney review with minimal revision
+ cycles across multiple active matters

Case Study 03

High-Volume NIW Documentation Workflow

LEGAL RESEARCH FIRM · SCALABLE OUTPUT · MULTI-FIELD CLIENTS

Developed and refined AI-assisted prompts for producing large volumes of NIW petition documentation across diverse industries — STEM, healthcare, technology — each requiring tailored arguments. Built quality-assurance prompts to review structural integrity, grammatical precision, and argument coherence at scale.

Enabled consistent quality across high-volume petition
+ drafting without sacrificing argument specificity

Case Study 04

Arbitration Vacation Motion — Research & Drafting

FEDERAL ARBITRATION ACT · INDEPENDENT PROJECT · COMPLEX RESEARCH

Used AI to systematically research the Federal Arbitration Act and state-level arbitration laws governing vacation of awards on discrimination grounds. Designed prompt chains to synthesize legal precedents, organize evidence, and draft a detailed motion — demonstrating AI utility in novel, research-heavy legal contexts beyond immigration.

Produced a complete motion package including affidavits
+ and responses to opposing counsel filings

03 My Prompt Engineering Process

01

Diagnose

Identify the task, output format, and quality standard before writing a single word

02

Architect

Design a prompt chain — breaking complex tasks into logical, sequenced AI steps

03

Engineer

Write, test, and refine prompts with role framing, context injection, and output constraints

04

Validate

Run outputs through a QA layer — checking accuracy, structure, and usability for the end user

05

Document

Package the workflow into an SOP so any team member can replicate it without

04

Core Capabilities

PRIMARY

Prompt Engineering

Writing, iterating, and optimizing prompts for structured, high-quality outputs. Specializing in multi-step prompt chains, role framing, and constraint-based generation for professional documents.

PRIMARY

Repeatable AI Workflows

Building end-to-end AI processes that can be handed off and replicated. Every workflow is designed with consistent inputs, predictable outputs, and failure modes accounted for.

PRIMARY

SOP Documentation

Translating complex AI workflows into clear, step-by-step standard operating procedures. Experienced in creating documentation that enables teams to replicate high-quality output without expertise.

Legal Document Intelligence

Deep expertise in prompting AI for legal outputs — immigration briefs, motions, affidavits, and compliance documents — where precision, citation accuracy, and structure are non-negotiable.

Research & Synthesis

Using AI to conduct and synthesize legal and factual research at speed — including case law, statutory analysis, and regulatory frameworks — while maintaining citation integrity.

Systems Thinking

Trained in litigation strategy and case management — naturally approaching AI problems as process design challenges. Sees patterns, identifies gaps, and builds structure from ambiguity.

05 Professional Experience

Jan 2023 - Oct 2025

The Law Office of Akintunde Adeyemo PLLC & The Brake Legal Group

VIRTUAL IMMIGRATION PARALEGAL · LEGAL RESEARCHER · AI WORKFLOW PRACTITIONER · REMOTE (U.S.)

- Engineered AI-assisted workflows for drafting EB-2 NIW, EB-1A, and O-1A petition briefs across diverse industries — achieving a 90% approval rate across filed cases
- Built repeatable prompt systems for RFE response drafting, translating complex evidentiary records into structured USCIS-compliant arguments
- Applied AI tools to high-volume NIW documentation, developing QA prompts to review structural integrity, argument coherence, and grammatical precision at scale
- Managed multi-matter caseloads in Docketwise, maintaining deadline compliance across active immigration files
- Drafted affidavits, cover letters, and supporting documentation for employment-based petitions under attorney supervision

Oct 2025 - May 2026

Dallah Law Firm

LEGAL ASSOCIATE

ASSOCIATE ATTORNEY · FAMILY LAW & CIVIL LITIGATION · NIGERIA

- Applied AI drafting workflows to Nigerian litigation documents — petitions, motions, affidavits, and statements of claim — improving drafting speed and consistency
 - Conducted legal research and prepared detailed memos using AI-assisted research processes
 - Drafted and reviewed contracts and transactional documents, ensuring compliance with applicable legal standards
-

Jan 2019 - Jan 2020

C.C Nwabuko and Associates

LEGAL ASSOCIATE · LITIGATION · NIGERIA

- Drafted and reviewed complex motions, appellate briefs, and procedural filings for trial and appellate courts
- Managed caseloads including document production, evidence evaluation, and court filings within statutory timelines
- Advised and represented clients in corporate disputes, negligence, breach of contract, and administrative actions
